

Precision Slides

PM - BEARINGS

Introduction

PM - BEARINGS (PM) is specialized in designing and manufacturing linear bearings in top quality. PM is providing a complete range of linear bearings, frictionless slides, positioning tables and stages, which guarantees high levels of performances at competitive prices. Thanks to a long history of experience, new findings in research, combined with innovating linear technology, PM products meet the highest accuracy and quality demands of today's industry and are successful in use worldwide.

Since the foundation in 1966, PM has become an **innovator in linear technology** with the specialization in the production of high- and very high precision linear bearings and frictionless slides.

Starting with the specialization in precision linear bearings PM has expanded and developed the linear-program through the years. Today, PM offers the widest range models and sizes to provide the designer maximum flexibility to achieve the best operating results in linear and rotary motion.

One of the goals is **customer-satisfaction** with additional increase of productivity and reliability against lower production costs. The PM organization is **dedicated to quality** and is focused to give quick and accurate information on customers request.

The main PM-products are published in:

- Linear Bearings
- Precision Slides
- Positioning Tables and Stages
- Linear Bearings for Unlimited Travel

Subassemblies

The growing market for complete subassemblies is fully supported by PM and is a major part of our Total Customer Care strategy. PM is offering not only extensive assembly-facilities, skilled workers and knowledge but also a time- and cost saving solution with increase of flexibility in today's rapid market.

Worldwide Representation

Made by PM means the same high quality, technical support and follow-ups whether in Asia, the U.S.A. or Europe. Our worldwide representatives are selected to serve you with the best technical advice and service guaranteeing fast and reliable deliveries in all local markets. Please, contact PM for the authorized representative in your area.

The specifications and data in this catalogue are believed to be accurate and reliable. However, in the interest of technical progression, PM reserves the right to modify without prior notice.

PM - BEARINGS

A complete range

of frictionless slides

and precision positioning tables

Product Overview

PM - BEARINGS frictionless slides, are ready-to-install 1-axis components for limited linear movements. The crossed roller slides use PM linear bearings type RSD, are factory pre-loaded. This, to assure a consistent high running accuracy, extreme low uniform coefficient of friction and a long operation lifetime. With various models and over a broad range of sizes, it offers the designer maximum flexibility to find a sufficient solution for each individual application in which a linear movement is required.

Each type is executed with attachment holes drilled to a

standard configuration to permit a quick and easy assembly in your application.

Thanks to the excellent running characteristics together with the well proven reliability, these slides are today's standard for application in the general machine industry up to high precision equipments.

Special executions will be supplied according to your specifications.

1. Crossed roller slides type RT

- Strokelenlengths 10-950 mm
- For highest accuracy performances
- Normal up to high load capacity
- Steel and cast-iron table bodies
- 6 sizes

2. Crossed roller slides lightweight type RTA

- Strokelenlengths 10-950 mm
- Extreme low friction resistance
- Setting standards in accuracy performances
- Aluminum table bodies
- 6 sizes

3. Dust-protected slides type RTNG

- Strokelenlengths 10-250 mm
- Protected against dust and chips
- For highest accuracy performances
- Steel and cast-iron table bodies
- High rigidity

4. Crossed roller slides lightweight type RTAM

- Strokelenlengths 25-76 mm
- For enhanced operation lifetime
- Low and compact design
- Aluminum table bodies
- 1 size and 6 lengths

5. Crossed roller slides low profile type RTS

- Strokelenlengths 12-130 mm
- For highest accuracy performances
- Low profile and high rigid design
- Steel table bodies
- 3 sizes

6. Miniature ball slides type PMM

- Strokelenlengths 5-70 mm
- Ultra-compact and lightweight design
- For rapid and precise movements
- Stainless steel table bodies
- 3 sizes

Technical Data

General

The PM range of linear bearings and "almost frictionless" precision slides are available in various sections with matching ball- and roller diameter in a wide range of standard lengths.

The choice of sizes (cross-sections) and lengths caters for almost all load capacities, enabling the designer to solve most linear motion problems with virtual frictionfree movements, free from play, with adjustable pre-load. Due to these features PM linear bearings are almost complete free from wear, needing only minimum lubrication and maintenance, and are used successfully in a wide range of industries, e.g.:

- Packing machinery
- Machine tools + other metal working machinery
- Automation applications
- Special purpose machines + special purpose tooling

Due to the high linear accuracy, which PM linear bearings offers, they are also used widely for:

- Measuring instruments
- Tool setting equipments
- Robotic devices
- Space applications
- Research projects
- Semiconductor equipments

To sum up, PM's full assembled frictionless linear slides, have a compact size, offer facility of installation, high accuracy of running motion, long life with only minimal lubrication, low maintenance costs, and ease of replacement in the event of damage. Because the linear bearings and linear slides are vital components in the application they are manufactured with the greatest care to provide the maximum of linear accuracy and reliability that is likely to be required.

Friction

PM frictionless slides give an unprecedented friction coefficient of <0.003 . Through this, the characteristics of the linear slides in combination with a correct mounting and lubrication find the best way for expression.

Friction is the force necessary to move a body along a horizontal plane or track. A fine machined surface gives a positive effect on the friction. Therefore PM is using the highest quality of roller bodies in combination with precision ground anti-friction guideways type RSD which are manufactured by a team of specialists. Compared with other types of friction, linear bearings fitted with balls or rollers offer not only much lower frictional resistance, but also an almost complete absence of static friction.

- μ = Coefficient of friction
- F_n = Normal force
- F = Frictional resistance

Note: wipers and seals give a negative reaction on the friction.

Lubrication

PM precision guides and slides are a main part in the construction of machines. The standardized high quality has to be secured during the calculated lifetime. Nevertheless dust and moisture are the main enemies of the precision bearings. Lubrication creates a film between the rolling surfaces and gives a sufficient protection against corrosion. Other benefits are for example:

- Friction reduction
- Reduction of wear
- Prolongation of lifetime
- Transport of heat

We prefer lubrication by oil CLP like DIN 51519 and HLP like DIN 51524. During operation the temperature has to be between -30°C till $+120^{\circ}\text{C}$ while the viscosity is between ISO-VG15 and ISO-VG100. Frictionless slides will be supplied with a sufficient oil lubrication. This lubrication, depending on the condition of use and the environment, will be working for years. However, experience has shown that a regular lubrication has a positive effect on the operation lifetime. By the application of PM precision guides which are manufactured of not standardized materials or used in special operation environments the lubrication has to be taken into account. For further information, please contact PM - BEARINGS.

Effect of Elevated Temperatures

PM slides can be used by temperatures between -40°C up to +80°C during operation. In case of doubt or questions by the use of motors, ball screws, measuring systems etc. please consult PM - BEARINGS.

When PM linear bearings are used at temperatures in excess of 150 °C, the track-rail hardness begins to fall off and the load ratings must be reduced in accordance with factor f_t , tabulated below. If different elements of a linear bearing assembly, which has been pre-loaded or adjusted for freedom of play, suffers differential temperatures, then this could have harmful effects. In the worst case, the pre-load can become excessive and cause Brinell-type indentations in the bearing ways. Accordingly, if high demands are placed on running accuracy, then such temperature differentials must be avoided.

Temperature in °C	Temperature factor f_t
125	1
150	1
175	0.95
200	0.90
225	0.82
250	0.76
275	0.68
300	0.61

Fahrenheit: 1 deg F= 0.5556 °C

Material and Hardness Linear Bearings

The guideways are manufactured of bearing steel 1.2842 or 1.3505 and are trough-hardened to 58-62 Hrc. The cylindrical rollers and balls are made of bearing steel 1.3505 with an hardness value of 58-66 Hrc, and are used in the highest grade quality. Only in cases, where the hardness is less than 58 Hrc (as for rust-resisting steels) the rated loads have to be reduced in accordance with the hardness factor f_h , tabulated.

Hardness			Hardness factor f_h
Rockwell Hrc.	Vickers HV	Brinell HB	
60	697	-	1
59	674	-	1
58	653	-	1
57	633	-	0.96
56	613	-	0.89
55	595	-	0.81
54	577	-	0.75
53	560	-	0.71
52	544	500	0.67
51	528	487	0.63
50	513	475	0.60

Load ratings, which are quoted in this catalog, actually refer to a Rockwell hardness of 58 Hrc.

Expected Life

To estimate the expected life for linear bearings the following calculation can be employed, providing that the recommended installation conditions, lubrication, and protection from dust and dirt are maintained.

$$L = (C/P)^e \times 1,15 \times f_t \times f_h \times 10^5 \text{ metres}$$

- L = expected life in metres.
- C = effective dynamic load rating in N.
- P = equivalent load in N.
- e = 10/3 for rollers and needle rollers, and 3 for balls.
- 1,15 = an empirical factor applicable to the materials employed.
- f_t = correction factor for temperature effects. (see above)
- f_h = correction factor for guideway hardness grades. (i.e.: below 58 Hrc)

Wipers and Seals

Whenever our linear bearings are installed under unfavourable ambient conditions, it is advisable to protect them from the ingress of dust and dirt. For anti-friction guideways type RSD, RSDE, N+O/M+V special endstops with felt-wipers can be supplied, optional to order. There are also fully enclosed RTNG-slides, with a small air-gap which acts as a seal (the necessary extension of the slide-base results in a considerable increase in length compared with standard units). For other sealing arrangements, or wipers, please enquire PM - BEARINGS.

Maximum Velocity and Acceleration

RSD + RSDE series linear bearings:

Max. recommended speed $v = 50$ m/min.

Max. acceleration $a = 8$ m/sec².

N+O type linear bearings:

Max. recommended speed $v = 50$ m/min.

Max. acceleration $a = 150$ m/sec².

(depending on type of bearing-cage used)

To attain maximum acceleration and speeds without skidding of balls or rollers (which can result in cage creeping) the bearings must be suitable pre-loaded (for details please enquire).

For higher accelerations and dynamics with our slide tables we provide modifications, please enquire PM-Bearings.

Assembly

The mounting holes of each type are drilled to a standard configuration in slide-top and -base and permit the user a quick attachment into the application. Thread holes in the table parts are according to ISO-standard. Dimensions in this catalogue are in mm.

PM linear slides are precision devices and require proper mounting to perform at rated specifications. They have to be mounted on rigid and fine-machined, preferable by fine-milling, flat surfaces and supported over their entire base length. Hereby the characteristic qualities of a PM linear slide will be shown to full advantage.

Loads and Moments

The slides listed in this catalogue are able to carry loads and moments in any direction. The load ratings are based on the fundamentals established by ISO and DIN for the calculation of roller bearings (ISO standard 281, for miniature slide type PMM DIN 636, part 3). To ensure the high running accuracy and to prevent against play, vibration and overloads have to be avoided. The load capacity C , defined in ISO76-1987, is the maximum downward load or force located in the center of the upper part in horizontal

zero-position.

Moment Load: the max. allowable moment load capacities listed in this catalog are created in three orientations

M_l = pitch moment: when a load is cantilevered (not symmetrically mounted) off the end of an axis, parallel to the direction of travel.

M_d = roll moment: when a load is cantilevered off the side of an axis, perpendicular to the direction of travel.

M_r = yaw moment: when a force causes a rotation moment about the center of an axis.

Exceeding of the listed moment ratings may reduce the life of the bearings and can degrade accuracy. Please feel free to contact one of our product specialists for more information.

Vacuum and Cleanroom Compatible Slides

Most of the PM slides can be prepared for use in (ultra- high) vacuum or cleanroom environments. Special care has to be taken for example with the selection of the low outgassing materials, special lubricants, surface finishings, vented stainless steel fasteners for use in blind tapped holes, special ball- or crossed roller-cages and with the selection of switches and wires. For the assembly of the tables we use modern clean-room cells upto ISO/FDIS 14644-1 class 5 with cleanspots class 3.

With over 35 years experience in this field we are ready to meet the most challenging requirements.

For more information please consult PM.

News Release

NEW QUALITY GRADE SF-CLASS FOR LINEAR BEARINGS OFFERS MAXIMUM PERFORMANCE

Dedemsvaart – The Netherlands, September 6, 1999

PM – BEARINGS BV (PM) announces a new innovative quality grade for their crossed roller bearings – Option SF-class. SF-Class (Super Finish) is used in certain optical and electronic scanning applications where vibrations can affect the reading of accuracy of the system. Other applications are fiber optic splicing equipments and wire bonding stages which require the highest class in accuracy and reliability. SF class offers a runout of no more than 2 micron over a travel distance of 1200mm.

The highly polished V-grooves provide the smoothest motion of any mechanical bearing system together with an extremely consistent virtually zero frictional force, which make this bearing well suited for applications where a precise reading of axial force must be obtained. The surface roughness of the V-grooves is less than 0.05 Ra instead of conventional guides with 0.1 Ra.

PM 's SF-class can provide linear travel in sub-micron range and is now available in all precision crossed roller slides and positioning tables.

PM is a leading manufacturer of high precision linear bearings, slides and stages. Their products are meeting the highest accuracy and quality demands of today's industry and are successful in use worldwide. The wide range of products offers designers maximum flexibility to match every requirement in linear and rotary motion applications.

Frictionless Precision Slides

RTN / RTL

PM frictionless precision slides type RTN and RTL are pre-loaded linear motion components, ready for mounting. The well proven design of this model offers a wide range of benefits as for example; high rigidity, no stick-slip effect and an unprecedented precision in linear movement thanks to the installation of a double-sided track-rail on the slide-base which eliminates machining errors on the slide-base.

Material Table Bodies

Size Ø1.5, Ø2, Ø3mm and Ø4mm: steel, black oxide finish.

Size Ø6 and Ø9mm: cast-iron, black oxide finish.

Features and Specifications

- Incorporates pre-loaded linear bearings type RSD and double-side track-rail, including roller cages.
- Slide-top and -base have equal lengths.
- 2 standard strolengths (N- and L-stroke).
Linear strokes are limited by internal mounted end-stops, two in the slide-top and one or two in the base-plate, depending on RTL or RTN version.
N-stroke: for normal stroke/travel, with normal loads
L-stroke: for longer stroke/travel, with reduced loads
- Size Ø1.5 and Ø2 mm: use in each direction (with brass roller cage type CC).
Size Ø3, Ø4, Ø6 (pitch t=9mm) and Ø9mm (pitch t=14mm): horizontal fitting model (with steel roller cage type AA).
Vertical fitting model (with brass roller cage type DD).
- All mounting surfaces are precision ground.
One flank of the slide (the side opposite to the adjustment screws) is ground parallel to the linear bearings to serve as a Reference Face.
- The slide-top is provided with tapped attachment holes, drilled to a standard configuration. The slide-base is equipped with countersunk-bored holes, which accept sockethead screws.
- Running accuracies are shown on page 46.

Options

- Selected slides can be supplied with an height tolerance of ± 0.01 mm.
- Cages can be replaced by plastic crossed roller cages type KZR or type KKLK for balls.
- Higher accuracy grade slides.
- Stainless steel version.
- SF-Class technology for maximum performance.
- High vacuum modification.

Notes by ordering

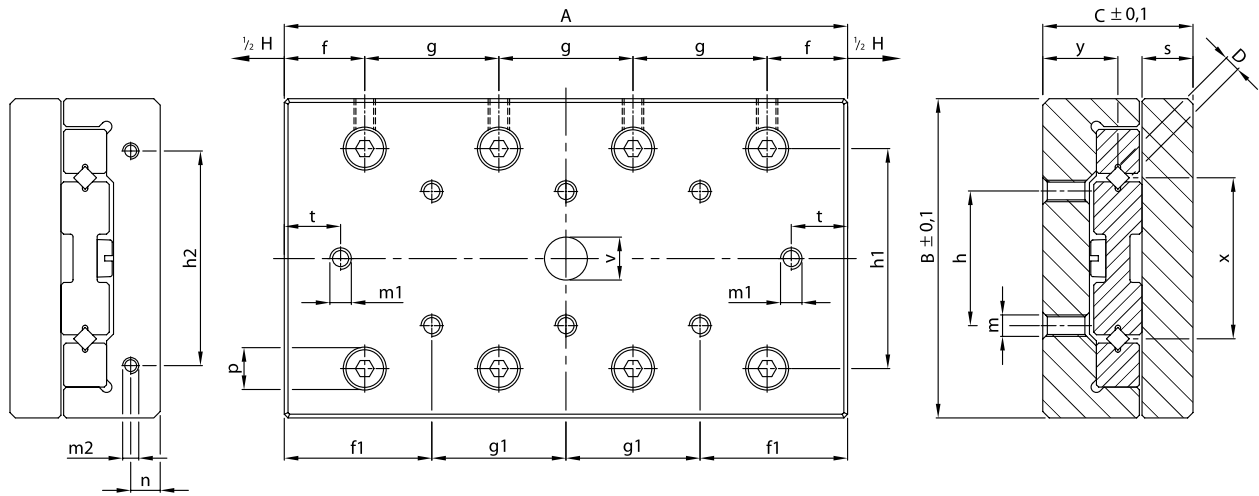

By ordering please specify the following:

1. Model no. and quantity.
2. Direction of linear movement (horizontal, vertical or "in between", only size Ø3, Ø4, Ø6 and Ø9mm).

Example: 1 piece slide type RTN-3250-Vert.

News Release

PM LINEAR BEARINGS AND TABLES NOW AVAILABLE WITH THE FIRST STANDARDIZED ANTI-CAGE CREEP SOLUTION

Dedemsvaart – The Netherlands, February 21, 2001

PM – BEARINGS BV (PM) announces the introduction of the first standardized Anti-Cage Creep (ACC) option for their crossed roller bearings RSDE and frictionless crossed roller tables (slides).

Cage creep can occur in non-recirculating linear bearing applications where vibrations, improper mounting, very high-acceleration and de-acceleration, inadequate tolerances on the mounting surfaces, uneven preload or moment loading are present. Cage creep often results in reduction of travel length and premature wear of the linear bearings.

The ACC option is designed for use in high-tech and extreme dynamic applications like wire bonding tables and pick and place units. It has proven ability to prevent cage creeping in the most demanding applications and the most severe test environment conditions. The ACC option is an all metal design and is integrated in the design of the linear bearing without influencing the external boundary or mounting dimensions. This allows the user to replace the bearings in existing problem applications in all orientations by the ACC option without any machine modification.

ACC can operate under temperatures of -40°C up to +80°C which is a significant advantage over similar systems using plastic components. This also makes it suitable for vacuum applications.

Max. acceleration = 15G

PM 's ACC option can provide linear travel in micron range with virtually zero friction and is now available in precision crossed roller bearings RSDE in sizes 3, 4, 6 and 9mm.

PM is a leading manufacturer of high precision linear bearings, slides and stages. Their products are meeting the highest accuracy and quality demands of today's industry and are successful in use worldwide. The wide range of products offers designers maximum flexibility to match every requirement in linear and rotary motion applications.

Frictionless Aluminum Slides

RTNA/ RTLA

PM frictionless slides type RTNA and RTLA are fine pre-loaded linear motion components, ready for mounting. Mainly made in aluminum, this model offers a wide range of benefits as for example; low weight, no stick-slip effect and easy to mount into the application. These slides are designed to meet the demands of general machine industry upto high precision equipments.

Material Table Bodies

Aluminum, clear anodized finishing.

Features and Specifications

- Incorporates pre-loaded linear bearings type RSD and double-sided track-rail, including roller cages.
- Slide-top and -base have equal lengths.
- 2 standard strolengths (N- and L-stroke).
Linear strokes are limited by internal mounted end-stops, two in the slide-top and one or two in the base-plate, depending on RTLA or RTNA version.
N-stroke: for normal stroke/travel, with normal loads.
L-stroke: for longer stroke/travel, with reduced loads.
- Size Ø1.5 and Ø2 mm: use in each direction (with brass roller cage type CC).
Size Ø3, Ø4, Ø6 (pitch t=9 mm) and Ø9mm (pitch t=14mm), horizontal fitting model (with steel roller cage type AA).
Vertical fitting model (with brass roller cage type DD).
- All mounting surfaces are precision ground.
One flank of the slide (the side opposite to the adjust ment screws) is ground parallel to the linear bearings to serve as a Reference Face.
- The slide-top is provided with tapped attachment holes, drilled to a standard configuration. The slide-base is equipped with countersunk-bored holes, which accept sockethead screws.
- Running accuracies are shown on page 46.

Options

- Cages can be replaced by plastic crossed roller cages type KZR or type KKLK fitted with balls.
- Higher accuracy grade slides.
- Stainless steel version.
- SF-Class technology for maximum performance.
- High vacuum modification.

Notes by ordering

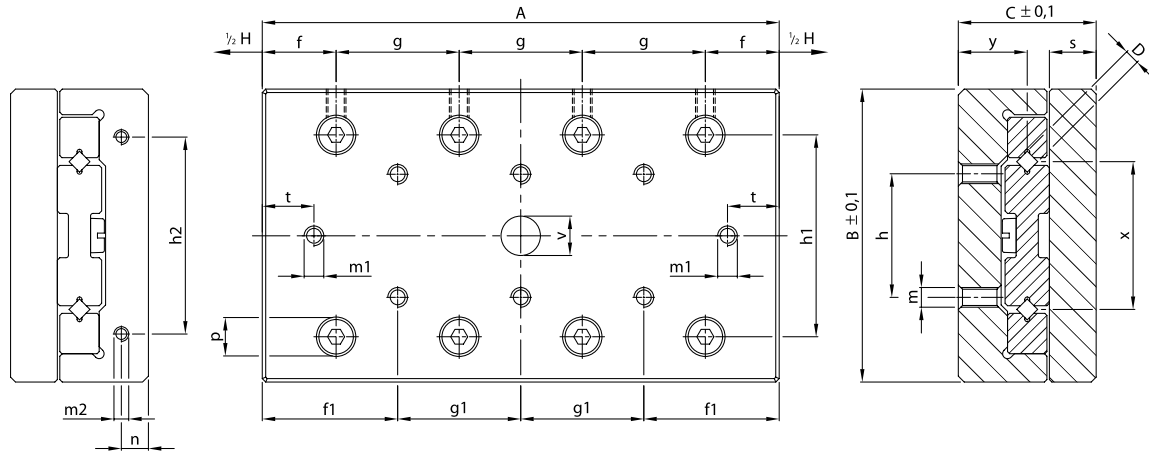

By ordering please specify the following:

1. Model no. and quantity.
2. Direction of linear movement (horizontal, vertical or "in between", only size Ø3, Ø4, Ø6 and Ø9mm).

Example: 1 piece slide type RTNA-3250-Vert.

Dust-Protected Precision Slides

RTNG

Precision dust-protected slides model RTNG are popular linear motion components for use under unfavourable environments. Thanks to the design, the linear bearings are protected against dust and chips and are therefore especially suitable for use under extreme conditions. Other characteristics are similar to conventional slides RTN/RTL

Material Table Bodies

Size $\varnothing 1.5$, $\varnothing 2$ and $\varnothing 3$ mm: steel, black oxide finish.
Size $\varnothing 6$ and $\varnothing 9$ mm: cast-iron, black oxide finish

Features and Specifications

- Incorporates pre-loaded linear bearings type RSD and double-sided track-rail, including roller cages.
- Linear strokes are limited by the endplates. It is not permitted to use this plates as machine endstops.
- Roller cage:
 - Size $\varnothing 1.5$ and $\varnothing 2$ mm: type CC
 - Size $\varnothing 3$, $\varnothing 6$ (pitch $t=9$ mm) and $\varnothing 9$ mm (pitch $t=14$ mm): type DD.Can be mounted in horizontal and vertical direction.
- Air gab (0.08 mm approx.) between slide-top and base.
- All mounting surfaces are precision ground.
One flank of the slide (the side opposite to the adjustment screws) is ground parallel to the linear bearings to serve as a Reference Face.
- The slide-top and - base are equipped with tapped attachment holes, drilled to a standard configuration.
- Running accuracies are shown on page 46.

Options

- Diam. $\varnothing 3$, $\varnothing 6$ and $\varnothing 9$ mm can be executed with dust protected wipers and seals for full covering, as showed on top of page 29 and 31. In this case it can lightly act as a brake on the running motion.
- Selected slides can be supplied with an height tolerance of ± 0.01 mm.
- Cages can be replaced by plastic crossed roller cages type KZR or type KKLK fitted with balls.
- Higher accuracy grade slides.
- Stainless steel version.

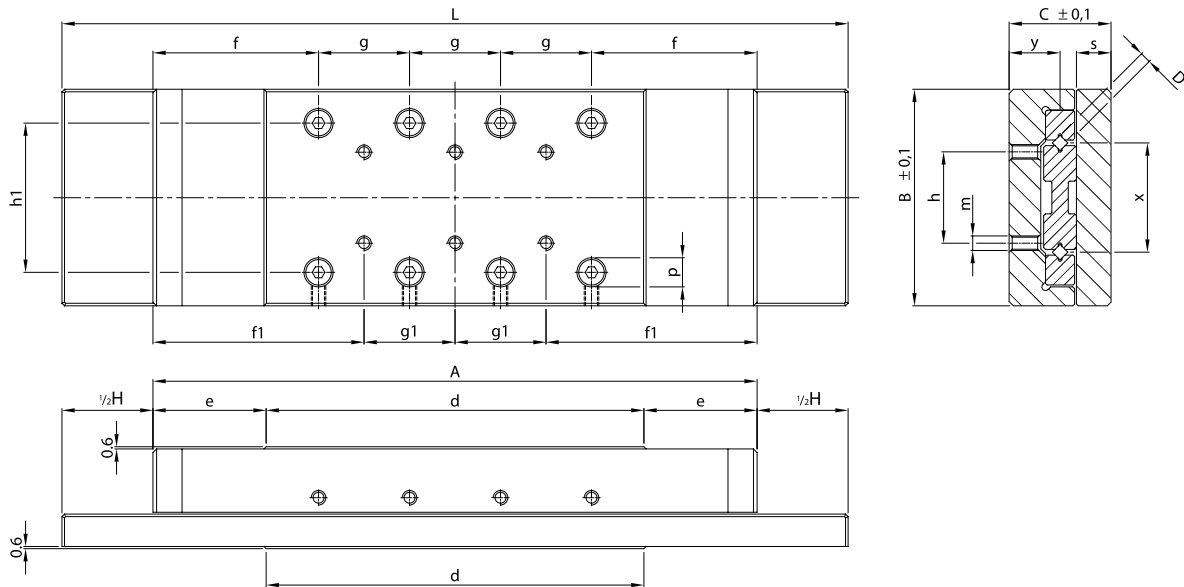

Notes by ordering

By ordering please specify the following:
1. Model no. and quantity.

Example: 2 pieces slide type RTNG-6200.

Frictionless Lightweight Slides

RTAM

Precision slides model RTAM are fine pre-loaded linear motion components, ready for mounting. This slidingtable, mainly made in aluminum, offers a long operation lifetime and is able to carry reduced loads and moments in every direction.

Material Table Bodies

Black anodized aluminum, mounting surfaces are finished by precision grinding.

Features and Specifications

- Incorporates pre-loaded linear bearings type RSD and center rail, including plastic roller cages, type KZR.
- Slide-top and -base have equal lengths.
- Can be mounted in horizontal and vertical direction.
- All mounting surfaces are precision ground.
One flank of the slide (the side opposite to the adjustment screws) is ground parallel to the linear bearings to serve as a Reference Face.
- The slide-top is equipped with tapped attachment holes, drilled to a standard configuration. The slide-base is equipped with countersunk-bored holes, which accept sockethead screws.
- Running accuracies are shown on page 46.

Options

- Cages can be replaced by plastic cages type KKLK fitted with balls.
- Higher accuracy grade slides.
- Stainless steel version.
- SF-Class technology for maximum performance.

Notes by ordering

By ordering please specify the following:

1. Model no. and quantity.

Example: 1 piece slide type RTAM-2075.

Low Profile Slides

RTS

PM frictionless low profile slides model RTS are fine pre-loaded linear motion components, ready for mounting. This low profile type offers an excellent running motion accuracy and is able to carry medium loads and moments in every direction.

Material Table Bodies

Steel, black oxide finish.

Features and Specifications

- 3 sizes.
- Incorporates pre-loaded linear bearings type RSD and double-sided center rail as slide-base (through hardened), including roller cages.
- Slide-top and -base have equal lengths.
- Can be mounted in horizontal and vertical direction.
- Rollercage:
 - Size $\varnothing 1.5$ and $\varnothing 2$ mm: type CC
 - Size $\varnothing 3$ mm: type DD.
- All mounting surfaces are precision ground.
One flank of the slide (the side opposite to the adjustment screws) is ground parallel to the linear bearings to serve as a Reference Face.
- The slide-top and -base are equipped with tapped attachment holes, drilled to a standard configuration.
- Running accuracies are shown on page 46.

Options

- Selected slides can be supplied with an height tolerance of ± 0.01 mm.
- Cages can be replaced by plastic crossed roller cages type KZR or type KKLK fitted with balls.
- Higher accuracy grade slides.
- Stainless steel version.
- SF-Class technology for maximum performance.
- High vacuum modification available.

Notes by ordering

By ordering please specify the following:

Innovation

Frictionless Miniature Slides

PMM

The PMM slides are leading the trend of reduction in size and weight. This compact model is showing a consistent high running motion accuracy without clearance by an unsurpassed reliability. Thanks to the innovating design combined with a fine adjustment (pre-loading is by selection on ball diameter), these slides are showing an extreme low friction resistance, smooth running qualities and long operation lifetime.

Material Table Bodies

Stainless steel 1.4034, hardness 54-57 Hrc.

Features and Specification

- 3 Sizes.
- Ball cage is made of brass.
- Can be mounted in horizontal and vertical direction (*special designed U-shaped cage eliminates creeping of the cage and is limited by using inside screws*).
- Slide-top and center rail have equal lengths.
- Mounting surfaces are fine machined by precision grinding.
- *All the flanks of the slide are ground parallel to the guideways and can serve as Reference Faces.*
- The slide-top and center rail are provided with tapped attachment holes, drilled to a standard configuration.
- Running accuracies are shown on page 46.

Options

- Selected slides can be supplied with an height tolerance of ± 0.01 mm.
- High vacuum modification available.

Notes by ordering

By ordering please specify the following:
1. Model no. and quantity.

Example: 1 piece slide type PMM 2-30.

Running Accuracies

PM slides are delivered with accuracies as mentioned in the table below. The checks on the slides are made in unloaded horizontal position. The shown values can also be used for 2-axis combinations. If so, please refer to the belonging slide-strokes. In case more axis are used in a

combination it will be more complicated and we offer in these questions our experience. On request the precision slides will be delivered with a certificate of compliance, measured with a HP laser accuracy equipment. Special higher accuracy grade slides can be requested.

Type	A. in mm.	 Straight Line Accuracy in μm^* over travellength on the side	 Flatness Accuracy in μm^* over travellength on top	 Parallism in μm^* , neutral position on slide top
RT (RTN/RTL)	25 - 50	2	2	5
	55 - 95	3	2	6
	105 - 155	4	3	7
	160 - 305	4	3	8
	310 - 510	4	4	10
	510 - 710	5	4	13
	810 - 1010	5	5	15

	105 - 155	5	5	5
PMM	15 - 30	3	4	5
	35 - 50	4	4	6
	60 - 80	5	6	8

Tolerance on the height: ± 0.1 mm.

* $1 \mu\text{m}$ = 1 micron is approximately 0.000040 inches

Most of the slides can be supplied with a height tolerance of ± 0.01 mm.

1. Straight Line Accuracy: this is the amount of error deviates from the ideal straight line of travel in the vertical plane.

2. Flatness Accuracy: this is the amount of error deviates from the ideal straight line of travel in the horizontal plane.

Parallism in μm , neutral position on slide top: the parallism of the table surfaces occurs unloaded on a flat, horizontal surface in zero-position.

Special Customer Design

At PM, we are able to supply linear bearings, frictionless slides and positioning tables to your specific application requirements. Relying on long history experience, know-how and manufacturing capabilities, our product engineers are able to design the most technical and economical solutions according to your demands, even when they're extreme. Special customer designed slides can be delivered within 6 weeks after approval.

Please, feel free to contact one of our product specialists for more information.
